

WHAT TO LOOK FOR IN SHOPPING FOR A WIRELESS ROUTER

You should look for something that is Dual Band, and capable of connecting at Gigabit speeds. This will ensure that you are getting the best possible speeds. Keep in mind the old adage, “You get what you pay for.” Some routers, while being more affordable, will perform at lower standards than those that are more expensive.

Here are 5 examples of Wireless Routers you can look into:

- Netgear AC750 Dual Band Wi-Fi Gigabit Router
- Netgear AC1750 Smart WiFi Router
- ASUS RT-N66R Wireless N900 Router
- ASUS RT-N66U Dual Band Wireless N900 Gigabit Router
- Netgear AC5300 Nighthawk X8 Tri-Band (Extremely High End)

Basically, you will be looking for something listed as Dual Band or Wireless A/C capabilities. You can look for these at Best Buy, or you can shop online and put one of the examples in a search.

Also, when looking for options be sure to check reviews; anything with thousands of reviews, and 4+ stars would be good to check into.
